

# **Mapping crises, communities and capitalism on OpenStreetMap: situating humanitarian mapping in the (open source) mapping supply chain**

*By: Anne Lee Steele  
Anthropology and Sociology  
Graduate Institute, Geneva  
State of the Map 2022  
21 August 2022*

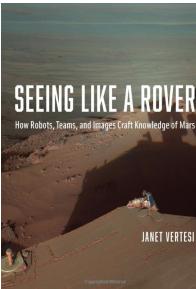

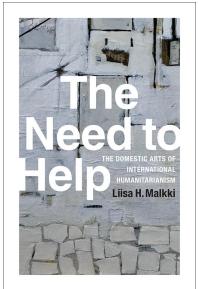

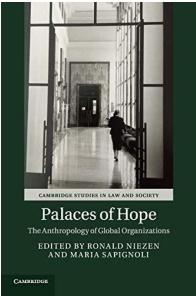

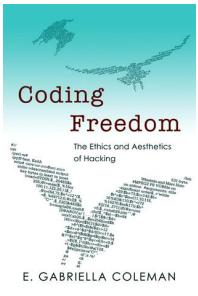

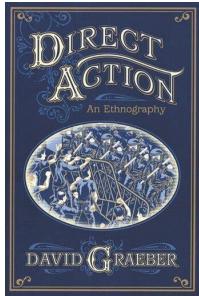

# HOT Summit, November 2021

The screenshot shows a video player interface. At the top left are the HOT logo and The Graduate Institute Geneva logo. At the top right is a small video thumbnail of a woman speaking. The main title in the center reads "Crisis maps, Community, and Corporations (An Anthropologist's Perspective)". Below the title is the author's information: "By: Anne Lee Steele, MA, Anthropology and Sociology, The Graduate Institute of International and Development Studies, Geneva (IHEID), HOT Summit 2021, 22 November 2021". The video player has standard controls at the bottom: play/pause, volume, and a progress bar showing 0:01 / 19:18. Below the video player is a description: "Crisis Maps, Community, and Corporations (an Anthropologist's perspective)" followed by "55 visualizaciones • 22 nov 2021". To the right are social sharing buttons: "NO ME GUSTA", "COMPARTE", "CLIP", "GUARDAR", and "...". At the bottom left is the channel logo and name "Humanitarian OpenStreetMap Team" with "2620 suscriptores". At the bottom right are "SUSCRITO" and a bell icon. The video content itself is visible as a thumbnail at the bottom.

**What's an anthropologist doing  
at State of the Map?**

# About anthropology & ethnography

- Anthropologists study “culture” (defined broadly!)
- Connecting individual experiences to wider processes (small → big)
  - Rituals, Kinship, Belonging
  - Social norms, Societies at large
- **Can we learn about data-driven communities with analogue methods?**

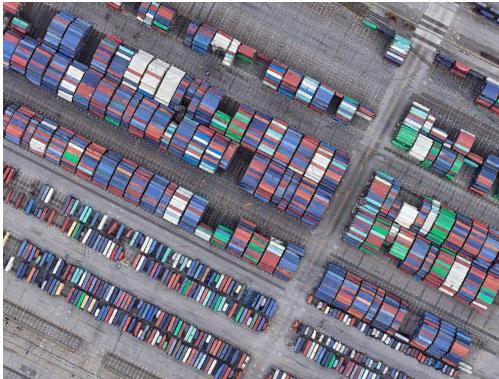

# Before OSM, I researched supply chains.

# Research Methods

Timeline: October 2020 - June 2021

## Interviews

**Primary:** members of Humanitarian OpenStreetMap Team, past & present

**Secondary:** Mappers from across the OSM “universe”

**Tertiary:** Users of geospatial technology, humanitarian/development professionals, related industry professionals

~ 30 interviews (~35 hours, so far)

## Participant Observation

Online events, conferences, lectures, mapathons

~ 30 events

## Archives / Documentation

Conference talks, twitter threads, email listservs, blogs, wiki, news articles, OSM diaries, podcasts...

~ 3,000+(?) notes

# Questions

## Questions (small-scale)

- Who makes OpenStreetMap, and why do they contribute?
- How is power distributed in the OSM ecosystem?
- How is humanitarian mapping affecting (or being affected by) other understandings of labor, humanitarianism, and technology?

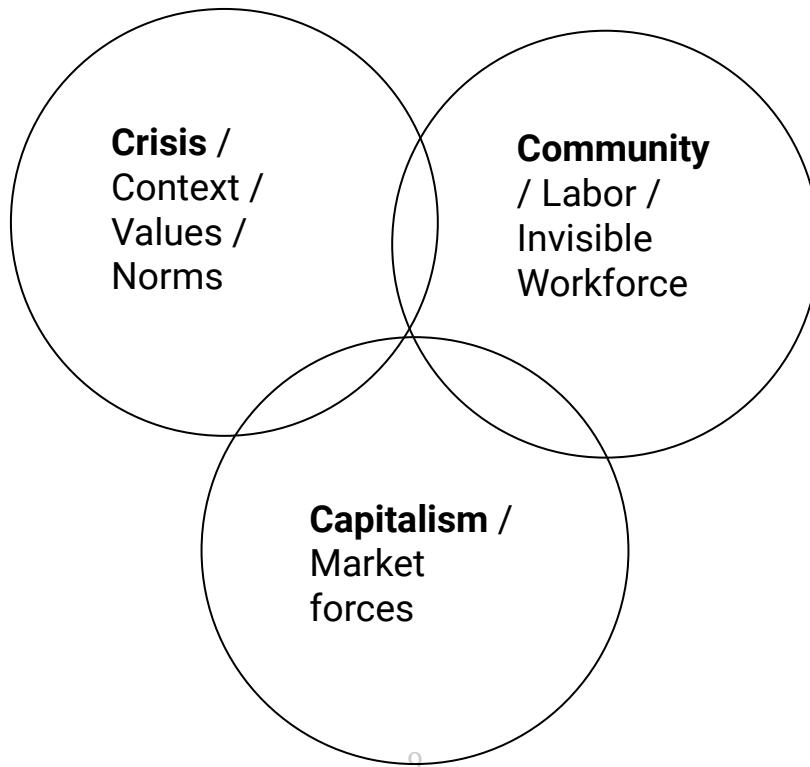

## Questions (bigger scale)

- What can OSM tell us about wider social processes?

**Part 1:**

**Mapping crises, communities, and  
capitalism on OSM**

## **Why these three?**

# **Crises**

# From the COVID-19 crisis to crisis mapping?

What is mapping, and why do it?

MISSING MAPS

Goal: Creating digital maps of the world's 'forgotten' places by crowdsourcing. Described as '[the human genome project for international development](#)'.

Why: Many parts of the world most vulnerable to humanitarian crises such as natural disasters, disease outbreaks, epidemics or conflict are not mapped. People have limited/ no visibility to the situation on the ground.

Humanitarian organizations use mapped information to plan risk reduction and

A Call to Take Action and Confront Systemic Offensive Behaviour in the OSM Community.

**UPDATE #2** - December 16, 2020 1700 CET - This document will be locked at 1700 PDT or around the early am UTC for comments and signatures. We thank everyone for their participation and hope to see many more take action against systemic offensive behaviour. Please add your SubCommittee to work on implementation. This document will be added to the OSM wiki. We sincerely thank you for your support and help with a pdf of this document. I am so moved by your support, Let's help OSM shift together.

Please free to send questions and/or comments to [heatherison@gmail.com](mailto:heatherison@gmail.com). We will collaborate with the LCCW/GO and the coalition of individuals below.

**UPDATE:** Thursday, December 10, 2020 - The OSMF Board agreed to have the LCCW/GO collaborate with this Coalition to build out the next steps, including proposals on Code of Conduct and enforcement. Please stay tuned as we will add more comments here and on mailing lists to keep you updated.

**NOTE:** -signatures will be closed on Wednesday, December 16, 2020 1700 CET. We will then move this note to an open space, likely the wiki. Stay tuned.

What Facebook fail to realize is the respective member in which their AI mapping workflow. The OSM community in Thailand had for years, been working slowly on mapping the Country, with the aim of producing a free to use and accurate map for any user. Information was added backed by a strong local knowledge, which resulted in a usable GPS navigation system based on OSM data. Main roads were main roads, and jungle tracks were

...read more

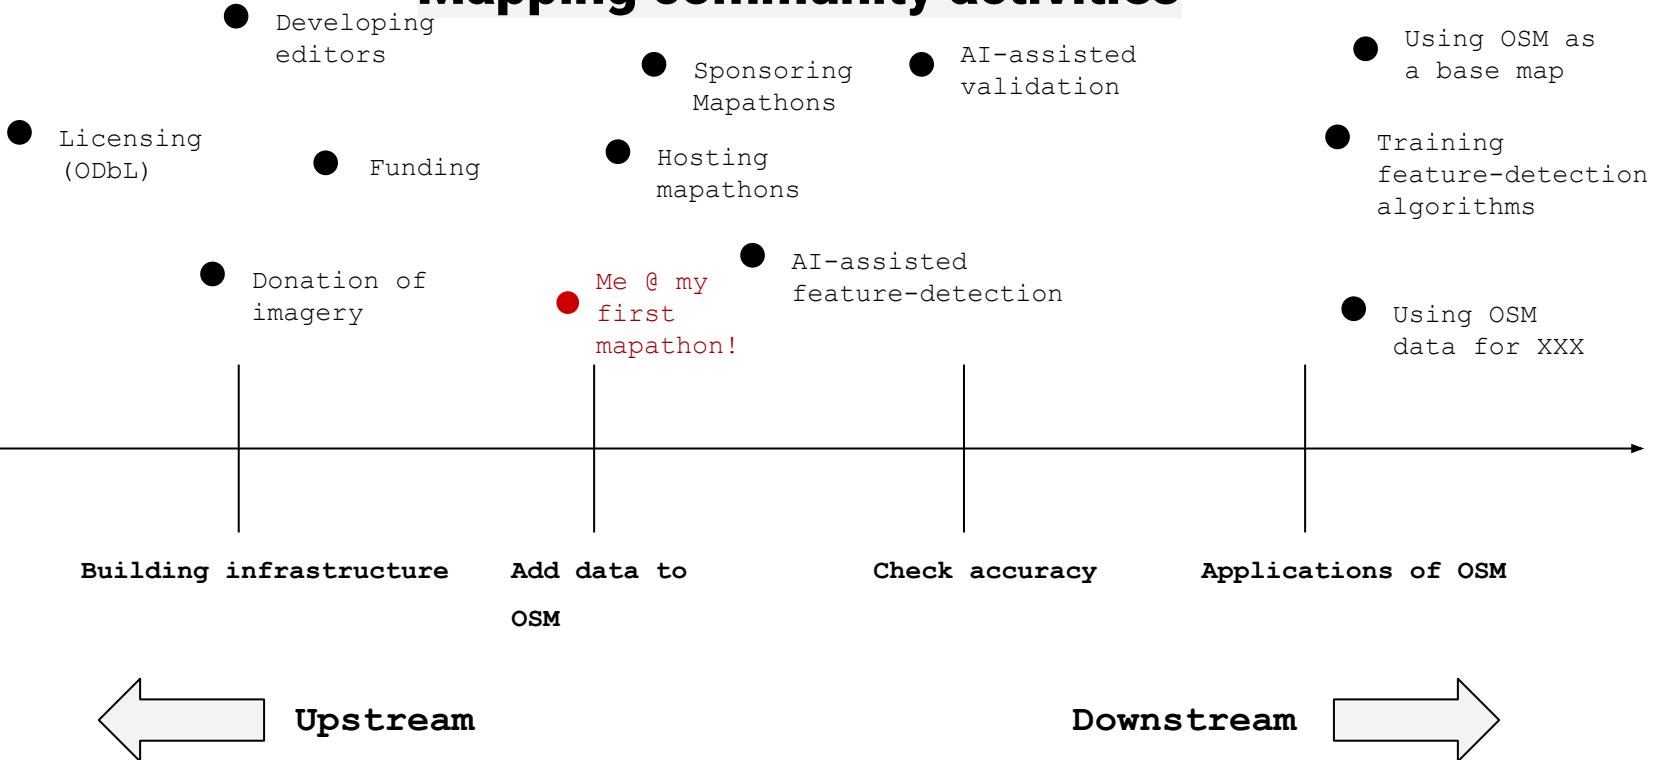

## Mapping crises

- “**Crisis**” as **negotiated, ongoing, flexible, strategic**
  - Both externally facing & internally debated
- Crisis as **constitutive**, as community-building
  - Rituals of conferences (SoTM, HOT Summit)
  - Mapathons
  - Mailing lists

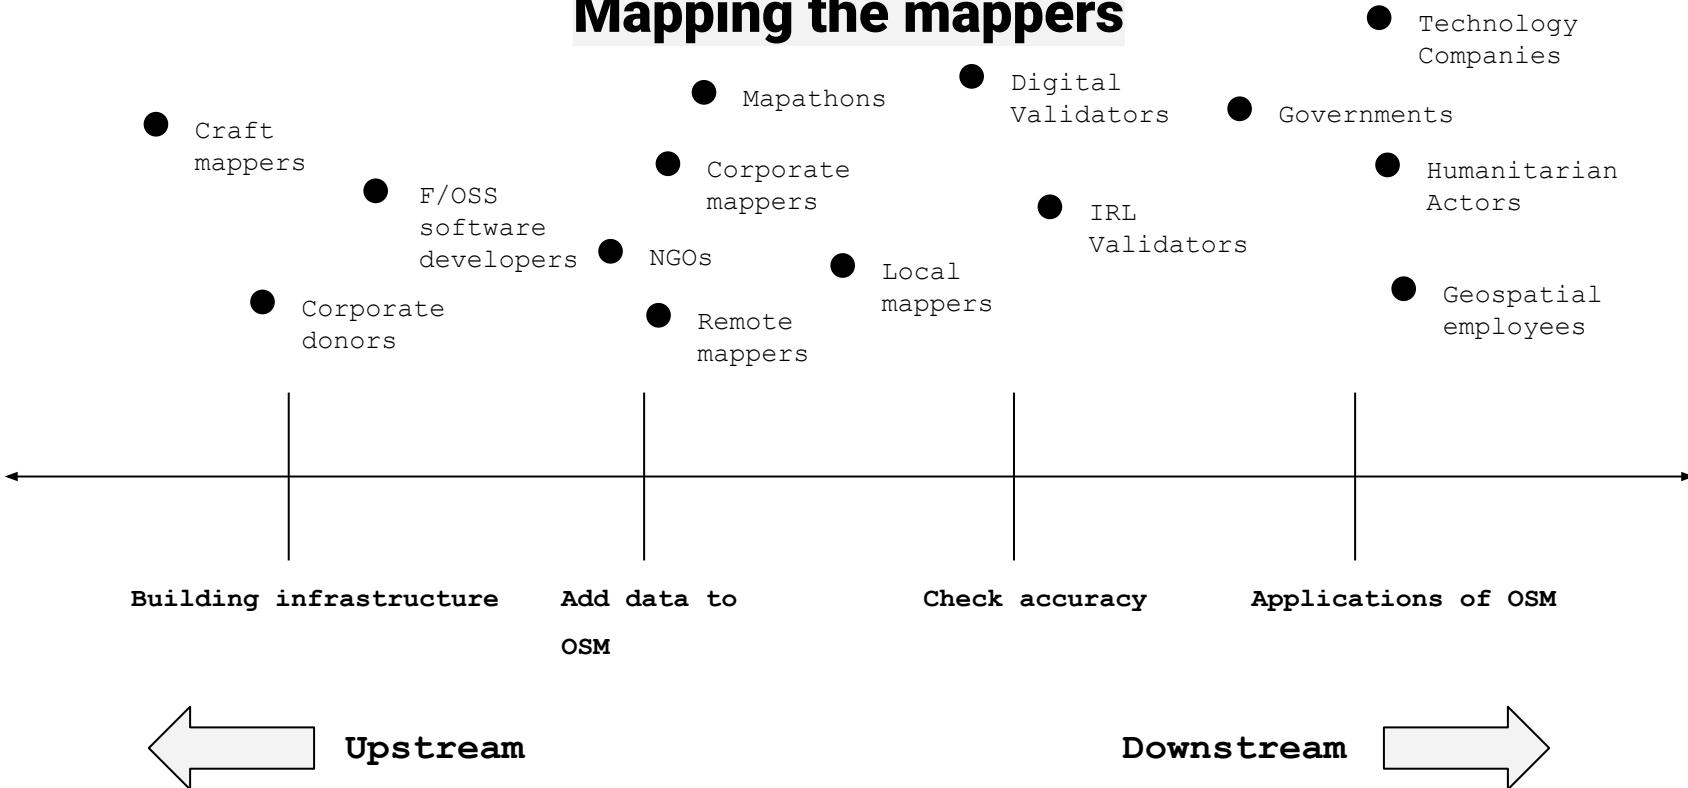

How does the split between community-based & technical-based questions affect how communities are being developed?

# **Communities**

# Mapping community activities

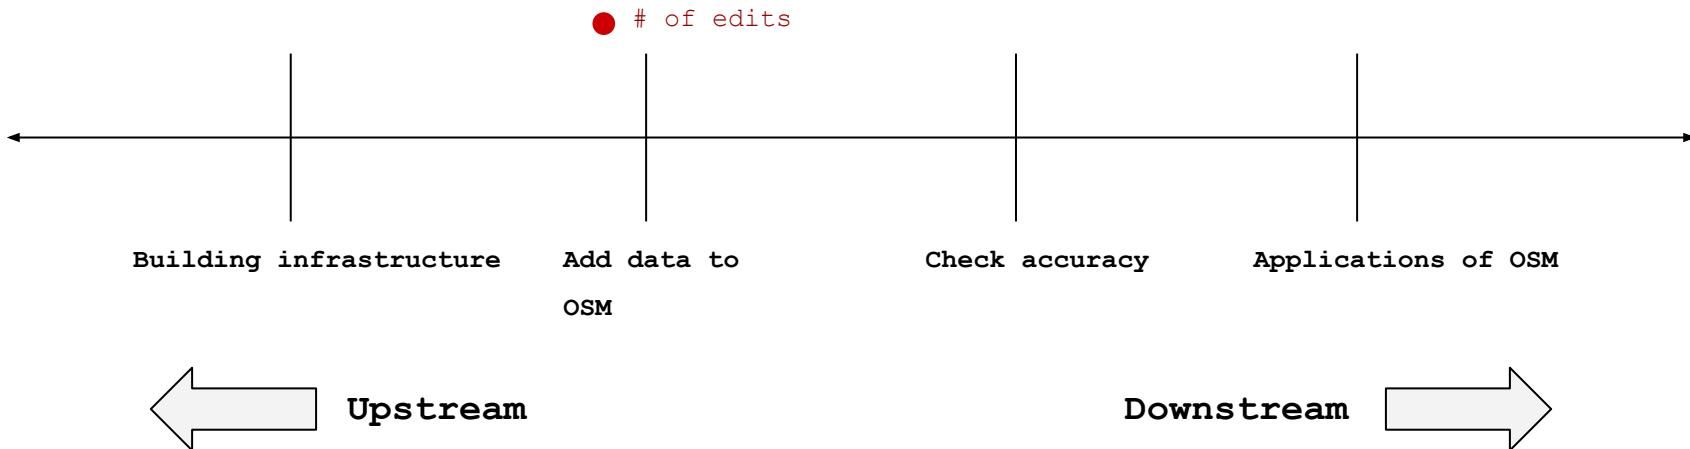

# Mapping the mappers

# What does power look like within OSM community?

"A part of people's power on OpenStreetMap is the number of changesets or the number of edits they've made. People always look at that. If you're saying or wanting to integrate a new local tagging scheme to try and recognise these local needs, and you weren't from that community [and] if you have only mapped it a couple times, I don't think your voice would really be heard by the wider open community."

# Mapping communities

- **Mapping a community → mapping a distributed process**
- **Community engagement**
  - “It’s just a map” → one-time or beginner mappers
  - “It’s not just a map, it’s a database” → upstream role
  - “OSM is a part of a wider industry ” → downstream role
- **Community-sourced =/= Crowd-sourced**
  - “Recursive Publics” (Coleman 2013, Kelty 2008)

# **Capitalism**

# OSM Data is a valuable commodity

While OSM is a tremendously valuable asset to the mapping community, (Accenture analysis values it at more than \$1.67 billion<sup>11</sup>), making the most of it requires careful and informed navigation. Expert teams and tools can help develop and execute a robust OSM strategy and there are active communities of professional and volunteer developers coordinating to improve data quality and richness globally, which is helping OSM evolve in three primary ways:

# \$1.67 billion.

# Fears of corporate creep → AI/ML applications

Mapping roads through deep learning and weakly supervised training

7/23/2019

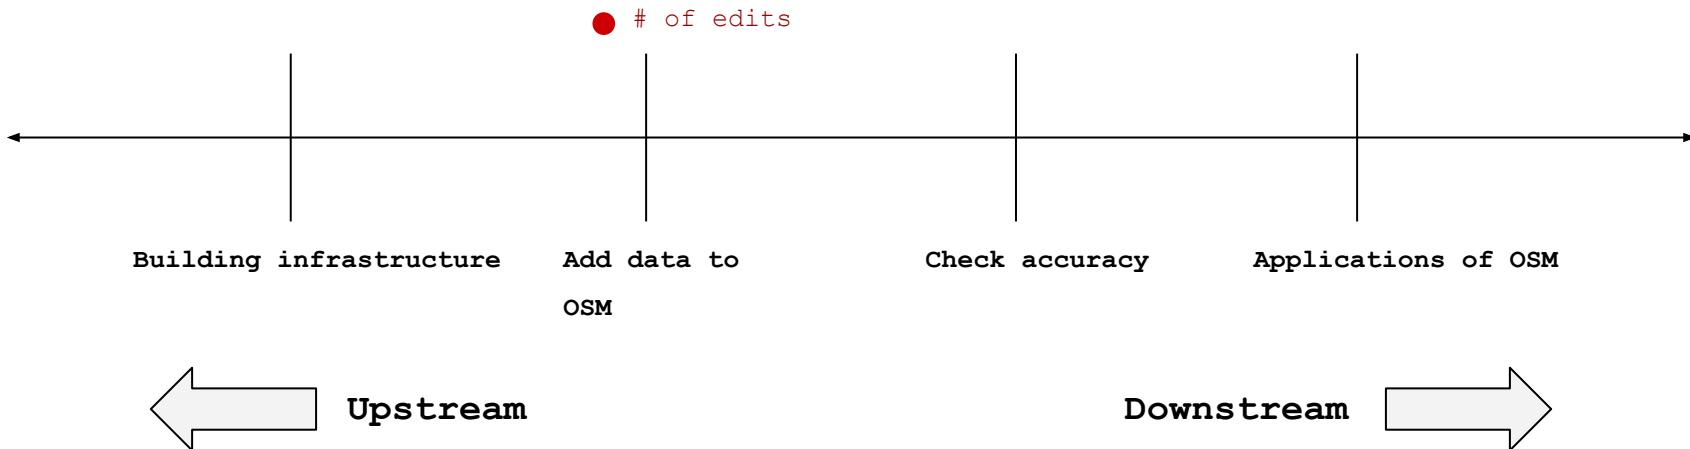

Creating accurate maps today is a painstaking, time-consuming manual process, even with access to satellite imagery and mapping software. Many regions — particularly in the developing world — remain largely unmapped. To help close this gap, Facebook AI researchers and engineers have developed a new method that uses deep learning and weakly supervised training to predict road networks from commercially available high-resolution satellite imagery. The resulting model sets a new bar for the state of the art for accuracy, and because it is able to accommodate regional differences in road networks, it can effectively predict roads around the globe.

# Where do companies sit?

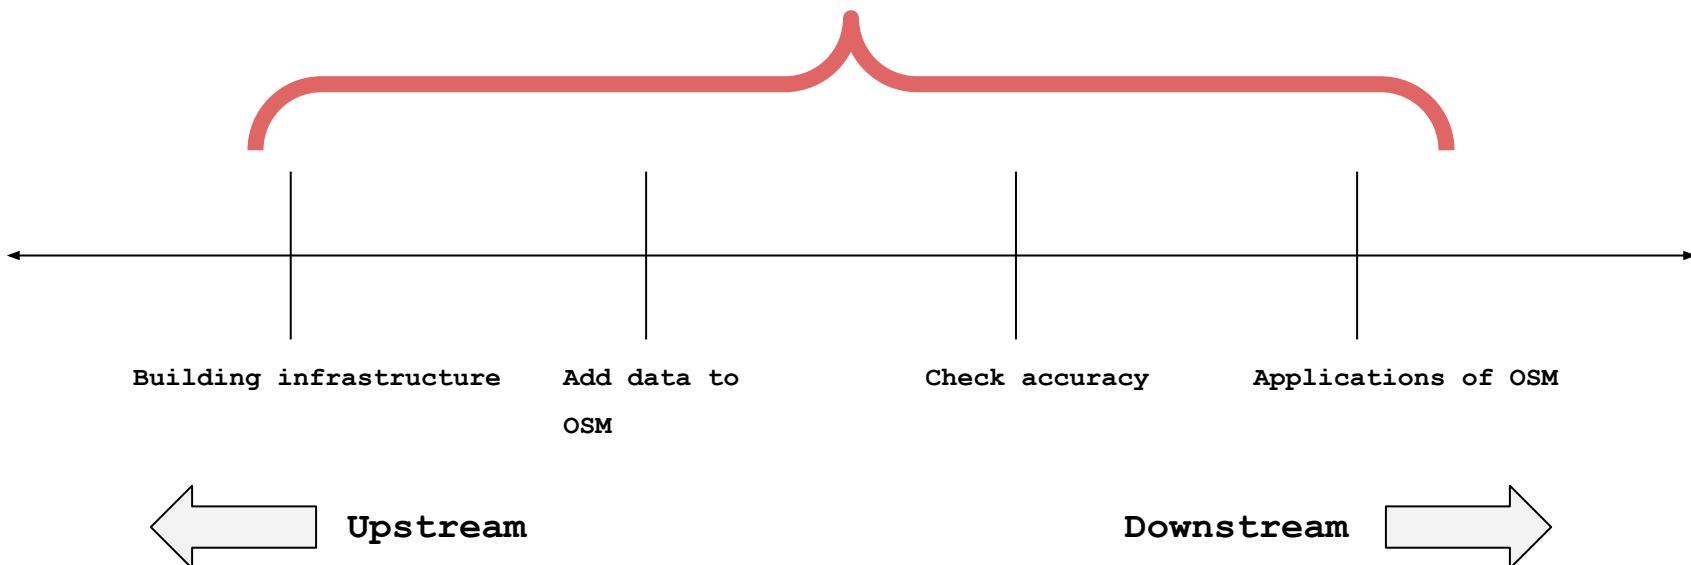

# What does power look like within OSM community?

"A part of people's power on OpenStreetMap is the number of changesets or the number of edits they've made. People always look at that. If you're saying or wanting to integrate a new local tagging scheme to try and recognise these local needs, and you weren't from that community [and] if you have only mapped it a couple times, I don't think your voice would really be heard by the wider open community."

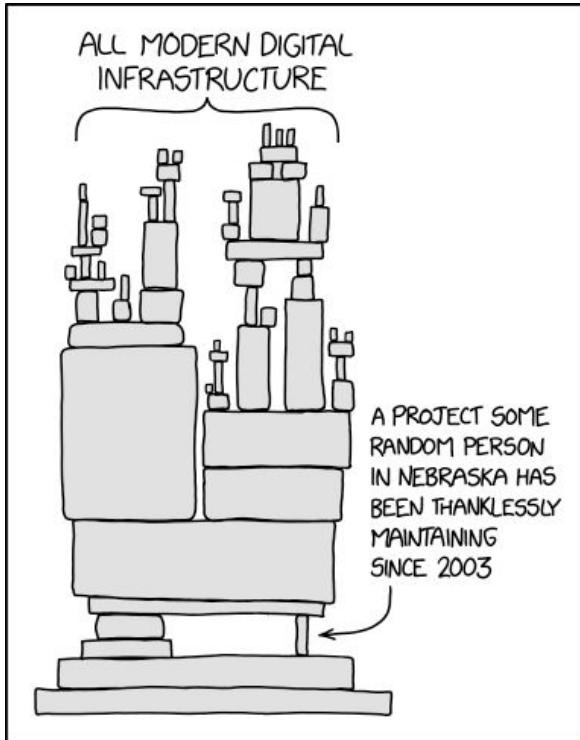

## **What does power look like within OSM more broadly?**

# Managers of the OSM supply chain

# But it's more complicated than that!

**Neoliberalism**

[nē-ō-'li-b(ə-)rə-,li-zəm]

A policy model that encompasses both politics and economics and seeks to transfer the control of economic factors from the public sector to the private sector.

 [Investopedia](#)

## ***What is this leading towards?***

- **Micro-scale & short term: OSM community dynamics**
  - Rapid expansion of humanitarian mapping projects
  - Influx of one-time mappers, low-quality edits
  - Growth of AI-assisted mapping
- **Meso-scale & medium term: humanitarian & corporate actors**
  - OSM map can compete with Google's
  - Trained feature-detection algorithms with diverse datasets
  - "*It's just a map*" vs "*It's a valuable commodity*"
- **Macro-scale & long term: Wider economic context**
  - Shifting landscape of digital work (Graham 2015, Wark 2019)
  - Growth of automation (Benanav 2020, Jones 2021)
  - Geospatial & humanitarian industries (+ Military)

What are the **short, medium, and long-term implications of these shifts?**

# Does OSM aim to be an economic pluriverse?

≡

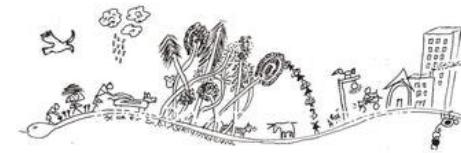

## Counter-Mapping the Philippines

An interdisciplinary project that calls for engaged, participatory and reflexive mapping practices, CountermappingPH is an initiative rooted in efforts to consolidate the experiences of dispossession and the struggles of vulnerable communities amidst development aggression and various disenfranchising processes linked with urban transformations and uneven economic growth.
